DETAILED ACTION

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, 23, 25, 27 and 28 drawn to the apparatus of an angled gripping joint, classified in class 182, subclass 186.5.
- II. Claims 22, 24 and 26 drawn to the method of assembling a sawhorse, classified in class 29, subclass 428.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process as claimed can be made by another and materially different process such as placing a U-beam splay bar between middle portions of the lumber legs first and then placing a U-beam top joint with a lumber end gripper upside down across an end portion of a lumber cross-beam thereby reversing steps a) and c).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
